

Nabox Litepaper

Introduction

As cryptocurrencies go mainstream, the demand for a versatile, simple wallet that does more than send tokens is rising.

With the myriad of new blockchains coming onto the market each vying for dominance, the issue of cross-chain compatibility only adds to the complexity for the end user.

By first solving the problem of cross-chain compatibility, Nabox strives to become a vital part of the DeFi ecosystem, and gradually serving users in use cases outside of DeFi as well, in their day-to-day lives. Nabox users can manage and sign their digital assets across various chains with a single DID. There are no centralized registration processes on Nabox, and all private keys are managed the user directly.

Our mission is to become the simplest gateway to Web 3.0 for DeFi.

1. History

Nabox was created in 2018 as simply a wallet built for the NULS ecosystem for the purpose of sending and receiving NULS tokens.

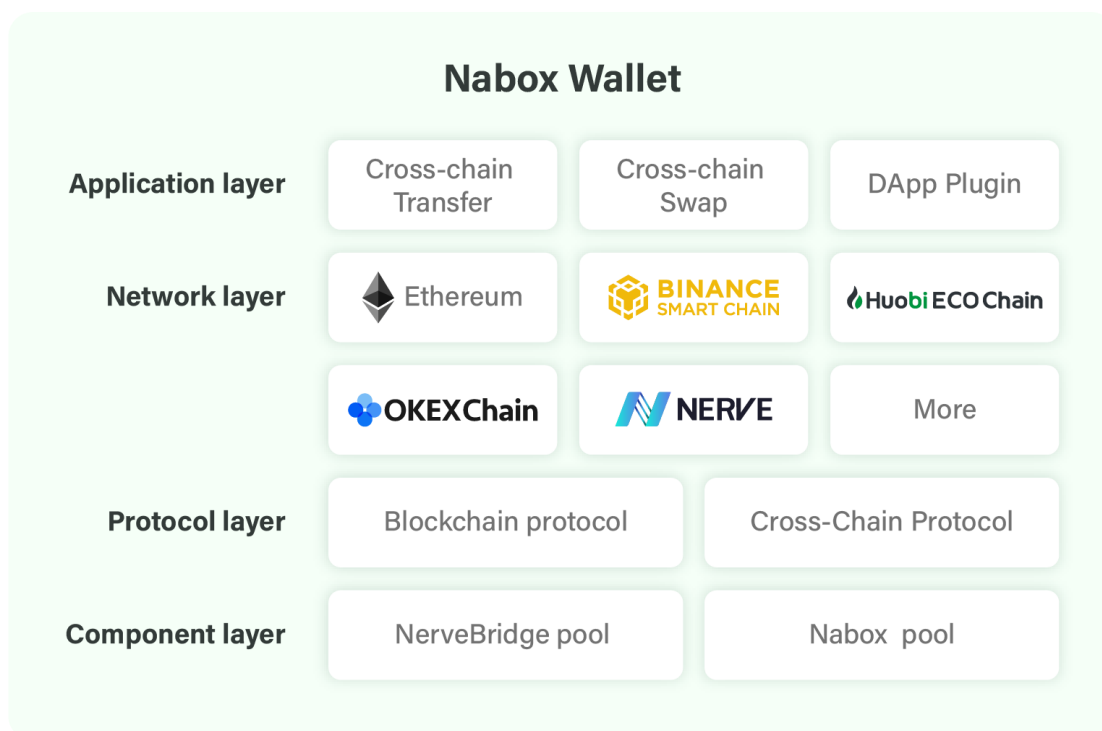

NULS is a blockchain infrastructure project built with cross-chain capabilities in mind, back when "cross-chain" was a buzzword. To that end, NULS incubated a cross-chain DEX in 2019, NerveNetwork, which now forms the foundation of Nabox's cross-chain functions.

As DeFi started becoming more and more popular, the vision of NULS started becoming more and more apparent. Sensing the market demand for a cross-chain wallet, the decision was made to branch Nabox off as an individual project so as to be able to dedicate resources for independent growth.

2. Nabox Competitive Advantages

- One-click cross-chain for easy swaps across different chains
- Works with Wallet Connect & various DApps
- Supports ETH, BSC, HECO, OKExChain, and various DApps on the NULS ecosystem
- Decentralized Identifier for management across chains and KYC purposes in future
- Current userbase: 20,000+, with over 40,000+ downloads

3. Product Architecture

As a cross-chain wallet, Nabox strives to achieve compatibility with most existing DApps across various chains, allowing seamless transfers and swaps and providing users a safe and efficient experience.

Network layer: A compilation of the largest number of DApps across various chains, currently including Ethereum, BSC, HECO, OKExChain, Nerve, NULS, and others to come.

Contract layer: Nabox connects to various public chains, creating an applicable address for each chain, all requiring only one private key, allowing internal transfers, and yet at the same time achieving cross-chain functions via Nerve's cross-chain capabilities.

Application layer: Consists of 3 main modules: Cross-chain transfer, Cross-chain swap, and DApp plugin.

4. Cross-chain Transfer

Nabox facilitates cross-chain transfers with NerveNetwork as a bridge via an API for each chain.

Virtual banks created on Nerve's consensus nodes are used to create and manage cross-chain contracts. They are responsible for the verification and execution of transfers from other chains.

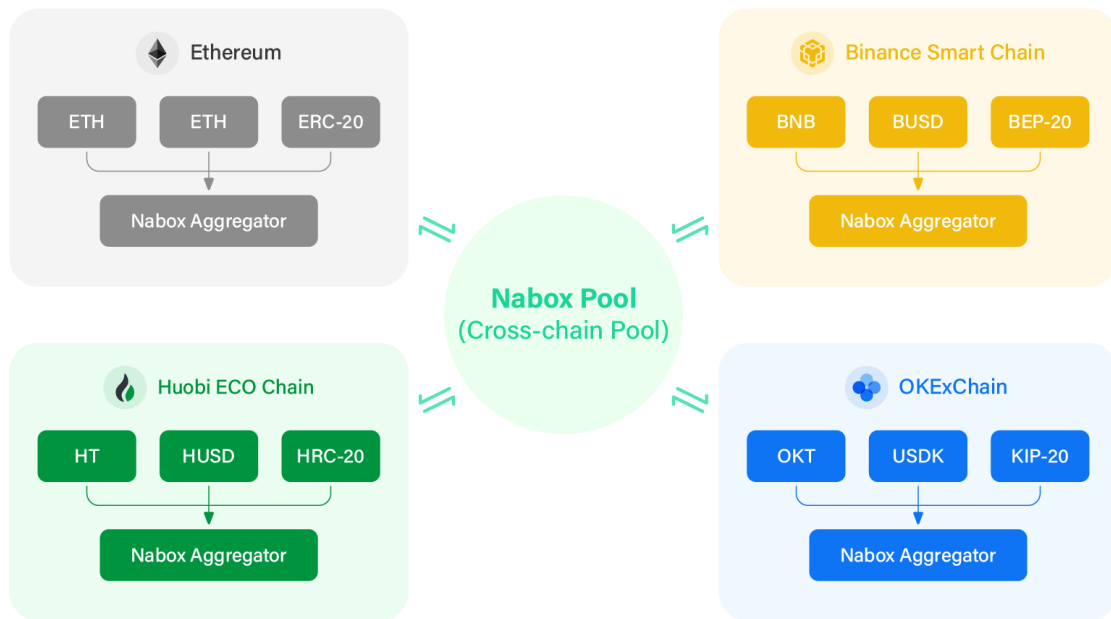

5. Cross-chain Swap

Nabox Swap's main capabilities are facilitated by two main components: Nabox Aggregator and Nabox Pool.

Nabox Aggregators are deployed to help users find the most efficient routings on connected networks. Nabox Pools allow users to achieve 0% slippage via NerveNetwork's cross-chain capabilities.

6. Nabox Pool

Nabox Pools are comprised of stablecoins and other assets across various chains on NerveNetwork. This type of Automated Market Making provides low slippage, opening up new possibilities for cross-chain swaps.

7. NABOX Token Utility

- Users can provide liquidity or stake their NABOX tokens for rewards. As the userbase grows, more pools and farms will be started based on user demand.
- Holding NABOX Tokens grants users various DID tiers, which allows for several different use cases.
- NABOX Tokens can also be used for voting purposes once the Governance module is ready for use.
- At a later stage, transaction fees will be levied on swaps, and a percentage of NABOX Tokens will be burnt in proportion.

8. Tokenomics

NABOX is a NRC20 token built on the mainnet of NULS. It is useable across various chains and is the governance token of Nabox. It can be used for voting on product features as well as various other scenarios.

NABOX tokens can be transferred across Nabox wallets with 0 gas fees through NerveNetwork. The tokens can be used for various rewards and incentives for encouraging engagement with Nabox, accelerating mainstream adoption of cryptoassets.

Maximum supply: 1,000,000,000,000 NABOX

Team: 15% | 150,000,000,000 NABOX (Linearly unlocked over 3 years)

Liquidity Mining: 60% | 600,000,000,000 NABOX

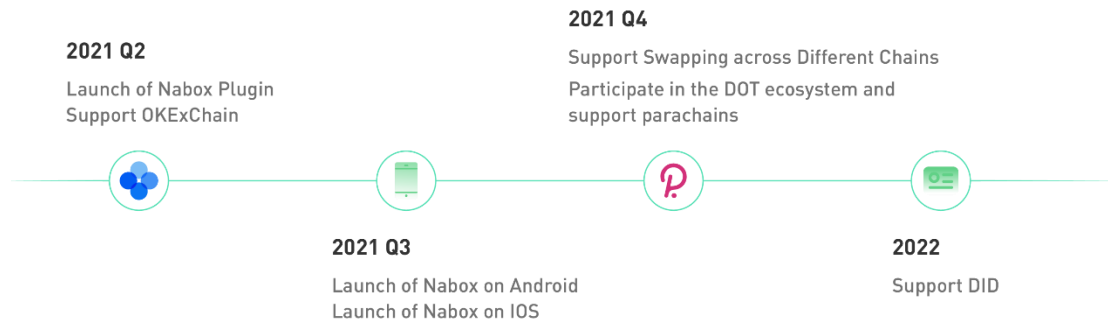

Institutional Investors: 20% | 200,000,000,000 NABOX (Unlocked over 18 months)

Airdrops to public: 5% | 50,000,000,000 NABOX (For rewarding Nabox supporters and active DID registrants)

Maximum supply: 1,000,000,000,000 NABOX
